

# HIGH SPEED VIDEO

## AUDIO DUPLICATION

We have the capacity to take a source program from any audio (or video) medium. We will create a CD master from your source program. If the source is in a digital format, it will remain digital throughout our duplication process until the point at which it is recorded onto the audio tape. The digital master is downloaded to the digital bin system. The program is then played from the digital bin and recorded onto analog tape which is then loaded into the cassette shells, printed, packaged and shipped directly from our facility.

## VHS DUPLICATION

At High Speed Video, you get more for your video duplication dollar. That's because we offer competitive pricing for every service you need to market your video: high volume duplication, standards conversion, digital mastering, custom packaging, graphic design, fulfillment, closed captioning, and Macrovision. Then, we manage each step of your duplication project knowing that you will stake your reputation on the work we do for you. That's why the job is done right the first time - every time. Why settle for less?

## CD & DVD REPLICATION

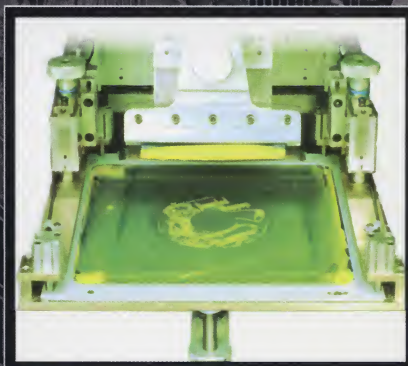

At High Speed Video, we own state-of-the-art replication equipment and all our replication is done in our Class 1000 Clean Room. Quality standards are put into place on your order even before replication begins. Our CD replication QC system is manufactured by Koch Digitaldisc GmbH of Austria, a world leader in optical disc testing. Prior to replication, we test the quality of the stamper against the standards for the specific disc type. Once the stamper quality is verified and replication begins, the quality of the replicated discs is continually monitored. In addition, all critical parameters for the applicable book formats are tested, both physical and electrical.

## CD & DVD PRINTING

We can print up to seven colors on your discs using the latest in screen printing technology from Autoroll

Corporation. Autoroll has long been considered a world leader in CD screen printing. In addition to high productivity, the printer is unsurpassed in quality control. Every disc's print quality is checked with an inspection camera. At 70 parts per minute, the inspection system photographs each completed disc and compares it to the original. The camera also verifies the disc's bar code and catalog ID, ensuring the printed information matches the program.

## GRAPHIC DESIGN & CUSTOM PACKAGING

Packaging influences your audience before they even view your program. High Speed Video will help make a powerful first impression. From color labels to shrink-wrapping, printed sleeves to plastic cases, we do it all. We also design custom packaging for clients with unique needs and preferences. Through our comprehensive packaging capabilities, we have helped some of the world's leading companies and organizations present their programs in exciting and compelling ways.

## FULFILLMENT

We offer many distribution services. Upon request, High Speed Video provides national and international shipment of orders. We maintain accounts with Federal Express and UPS for daily pick-ups of our clients' "drop shipped" orders. If you need specialized fulfillment, High Speed Video will incorporate your printed materials during the packing process.
